Gift tags: 10 per sheet, 5 cuts

The build from the video on one page — so 30 names make three sheets, not thirty.

1 The sheet

- Create a design the size of your paper: Letter (custom size 8.5 × 11 in) or search "A4".
- File → Rulers and guides → Add guides → Custom: 2 columns, 5 rows. Ten tags, filling the page.
- Each tag: 4.25 × 2.2 in on Letter, 105 × 59.4 mm on A4 (our layout).

2 One tag, then ten

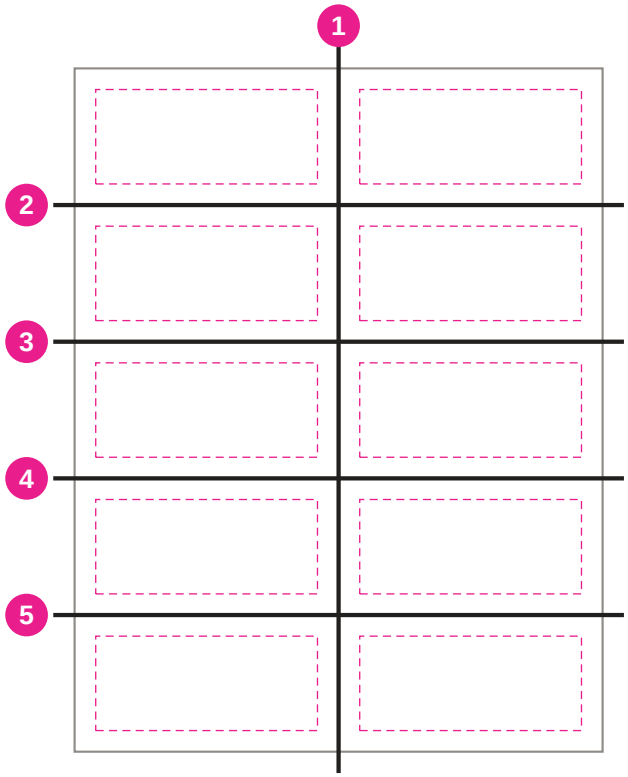
- Rectangle to the guides. Everything ~8 mm (1/3 in) inside — home printers lose 3–6 mm per side.
- Art at one end, the hole at the other, then To and From. Group, duplicate, fill all ten cells.
- Draw pale grey, very thin cut lines on the INSIDE guides only. Guides do not print.

3 Names — ten columns, not one

- Bulk Create makes one page per row of your list. One "Name" column = one page per name = one sheet of card per tag.
- Use the CSV: Name 1 … Name 10 across. Connect each to its own tag. Each row = one sheet. 30 names = 3 rows = 3 sheets.
- Bulk Create: Pro, Teams, Business, Enterprise, Education, Nonprofit — not Canva Free. On Free, type the ten names and duplicate the page.

4 Print

- Download → PDF Standard. Crop marks (PDF Print) only mark the page edge — your grey lines do the job.
- Scale 100% / Actual size — never "Fit to page". Test on plain paper first, then card.



pink dashes = keep everything inside (~8 mm)
outside edges = the paper's own edges: never cut

The five cuts

Cut 1: straight down the middle — two strips of five. Cuts 2–5: across each strip on the four lines. Punch the hole well clear of the edge, so the ribbon will not tear it out.
